DETAILED ACTION

This office action is in response to the amendment and remarks filed 2/21/06.

Election/Restrictions

1. Applicant's election with traverse of the species of claims 1-12 (as disclosed in paragraphs 56-61) in the reply filed on 2/21/06 is acknowledged. The traversal is on the ground(s) that "a regular invention restriction would have been more appropriate". The application contains claims directed to a pump, a drive circuit and a memory. Both the drive circuit and the memory as claimed can be used for any type of device, not necessarily a pump. Therefore, the application contains inventions that are patentably distinct from each other. Therefore, the requirement is still deemed proper and is therefore made FINAL.

Abstract

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet **within the range of 50 to 150 words**. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

The current abstract exceeds the 150 words. Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by **Bishop et al.** (US 6,071,088).

Bishop teaches a pump 50 comprising: a pump body for at least partially defining a pumping chamber 18; a piezoelectric actuator 112, 212 situated in the pump body and responsive to a drive signal for pumping fluid; and a drive circuit 42 which produces the drive signal, wherein the drive circuit has a memory. **Bishop** teaches that the computer 42 serves as the drive circuit, and inherently a computer contains a memory. See particularly cl. 6 ll. 36-46; cl. 8 ll. 26-30 and Figure 3.

Allowable Subject Matter

5. Claims 2-12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
